C Stavridis (they/them) • Portfolio

Senior Product Designer with 9 years of experience working with early-stage healthcare startups. Spent 6 years building CareSignal, a Best in KLAS Remote Patient Monitoring platform, and 3 years on 0→1 projects at Lightbeam Health Solutions.

hey.c@stavridis.codes • (928) 713-3945 • Saint Louis, MO 63104

Highlights

- **Caresignal 0→1:** Led product design and road map; designed clinician web application nurse care managers used to safely scale from 100 to 1,500 patients; contributed to $5M ARR and 144% NRR
- **Radian:** Launched a 0→1 "Health Equity strategy in a box" product to the Microsoft marketplace, unlocking $250K/year in Azure credits and a $50K incentive
- **Healthcare instructor:** Taught Product Design for Health and Service Design courses at Washington University in St. Louis

Relevant Experience

Independent Practice · prompt && pleasant, Recurse Center · 08/2024 – Present

- **LiquidStack:** Built a cross-device ISO compliance application with line workers of a fast-growing coolant distribution unit manufacturer.
- **St. Louis Queer Support:** Redesigned resource submission form based on research with community members and data team; reduced 495 inputs to six fields for community submitters, with the full detail unlocked for people affiliated with the resource.
- **AI Prototypes:** Drafted a compound-AI tool that creates divergent design assets from visual works rated via a brand assessment; researched an ML tool to conserve the work of Sol LeWitt.

CareSignal (acquired by Lightbeam Health Solutions, 2021), Saint Louis and Remote · 06/2015 – 08/2024
VP of Product and Co-Founder, 2015–2021 · VP of Product (IC), 2021 – 2024
Sole product designer who led product and brand through acquisition. Then, IC lead on 0→1 projects.

Clinician Web Application
CareSignal began as an alert-based research tool. To commercialize it, we needed to help care teams manage larger patient populations without increasing manual outreach.

- Performed research activities for product discovery and iteration, including market research, reviewing quality of life studies, participating in Sales conversations, facilitating design conversations, shadowing users, iterating on analytics, and launching product surveys.
- Used research to validate design decisions and iterate on the web application that enterprise care teams used to manage thousands of patients with complex care needs.
- Designed touchpoints so users could share alerts and the risk stratification data with downstream clinicians in various settings, including the web-based dashboard, printed reports, emails, faxes, Excel sheets, and plain-text EHR notes.
- Crafted many ways to communicate the value of CareSignal and its users' work to managers, executives, and downstream providers. ranging from monthly utilization reports to annual reports with claims analyses.
- Together, these workflows helped nurses manage 1,500 patients instead of 100, increasing capacity 15x and contributed to $5 million ARR and 144% NRR.

Patient Enrollment Optimizations
CareSignal had 18-month long Sales cycles and short, 12-month contracts. In order to reduce patient

acquisition costs and realize leading indicators of success faster, we needed to both call more patients and increase their enrollment rates.

- Aligned Enrollment, Engineering, and Account Success to identify barriers across the enrollment journey.
- Used enrollment rejection data to design coordinated enrollment touchpoints that educated patients and encouraged program participation.
- Identified and recommended a year's worth of product initiatives that ultimately improved hourly call volumes, reduced enrollment costs, and eliminated rote manual data tasks.
- Increased enrollment conversion from 5% to 21% and outbound calls 37% to 192,000.

Radian
When Lightbeam acquired Jvion, an AI-powered predictive analytics company, we had an opportunity to leverage Jvion's underutilized Health Equity AI and position Lightbeam as a leader in Health Equity.

- Devised Radian, a free "Health Equity strategy in a box" data product that produced location-specific dashboards and actionable, co-branded materials based on granular Social Determinants of Health vulnerabilities predictions from Jvion's proprietary Health Equity AI.
- Established and led multiple cross-functional committees that met weekly or bi-weekly to
  - Review accuracy of insights and request updates to the data with the Data Science team
  - Create actionable, patient-facing health communications with the Clinical team
  - Establish a new process for developing secure applications with Security team
  - Iterate on compelling reports with the Marketing and Sales teams
  - Test UX with internal stakeholders, current customers, and prospects
- Developed an enterprise version of Radian as a transactable offer on the Microsoft commercial marketplace and qualified the company for Microsoft's top ISV partner tier, unlocking $250,000/year in Azure credits and a $50,000 Microsoft incentive.

Education
BFA Communication Design, Computer Science Minor · Washington University in St. Louis, 2011

Certifications
Experiments in AI-Generated Media, MIT · 2021 ◆ Data Foundations Nanodegree, Udacity · 2018 ◆ Storytelling for Influence, IDEO · 2016

Skills
- **Research & Standards** Human-Centered Design (HCD) · user experience (UX) research · usability testing and evaluations · research plans and usability test plans · participant recruiting and interview facilitation · qualitative and quantitative synthesis · iterative design
- **Design & Deliverables** use cases · user journeys · user flow diagrams · navigation structures and information architecture · storyboards · wireframes · prototypes · design specifications
- **Accessibility & Systems** WCAG 2.0 / 2.1 AA · design systems · digital design language · conversational UI (SMS/IVR) · user stories and sprint planning
- **Tools & Collaboration** Figma · Adobe Creative Suite · Sketch · HTML/CSS/JavaScript and React for responsive web prototypes · design workshops and collaborative working sessions · presenting design rationale and research findings to executives
