

C Stavridis
Designer & Engineer
with big Golden
Retriever energy™

I design products from 0 to 1, build design systems, and ship them in code. Previously co-founded and exited an enterprise digital-health company. Now I use AI to explore and prototype, delivering high-craft work across design and front-end.

Experience

Participant Recurse Center, Remote · Sep 2025 – Mar 2026

Designed several full-stack prototypes to explore creativity and joy. I primarily used Next.js, TailwindCSS, React, TypeScript, Supabase, and Vercel. Highlights:

- **Facets is a tool to codify your taste to generate experiments.** Users save and rank visuals against Aaker's Dimensions of Brand Personality. Users are encouraged to include written rationale. Facets can prompt many AI models via OpenRouter to generate novel assets in HTML, SVG, p5.js, and GSAP.
- **Rain Check helps users send thoughtful event cancellations.** It's inspired by paper invites and bank-note design. Visualized with SVG, CSS, Mapbox, GSAP.

Creative Technologist prompt && pleasant, Remote · Jan 2013 – Sep 2025
prompt && pleasant is a studio practice I share with my spouse.

- **Recently built a distributed, air-gapped Electron app for a scaling manufacturing team.** They were in the process of compressing their complex, six-month builds down to one month. The app digitized and centralized their records to track progress, improve adherence, and meet ISO compliance.
- **Led design, user research, front-end engineering, and API design.** Used AI to quickly prototype, pitch, and test features. Hand-wrote code for production. Built the core scaffolding in Node.js, React, TypeScript, and Electron's IPC API. Designed bespoke UI flows and branded components with shadcn-ui.

Career Break Aug 2024 – Sep 2025

Spent time building community and bonding with my toddlers, spouse, and dog.

Co-Founder, Product and Brand Lead CareSignal

Saint Louis and Remote · Jun 2015 – Aug 2024

Established and led a compassionate product practice while contributing as an individual across the full product development lifecycle — research, production, support, maintenance.

- **Created CareSignal's design system.** Built WCAG 2.1-compliant components using atomic design and utility-first principles. Documented the component API in Storybook. Used SCSS and tokens to generate a branded color and type system. The system improved load speed 1.5x and is still in use today.
- **Increased patient enrollment rates 300%.** Increased quarterly call volume by 37% to 192,000 calls. Designed an omni-channel strategy; led a cross-disciplinary team; and personally designed print materials and developed full-stack digital touchpoints necessary to achieve those outcomes.
- **Contributed to \$5M ARR and 144% NRR YoY,** leading to our acquisition in November 2021. CareSignal debuted in KLAS as an Emerging Solutions Spotlight in 2023; won Best in KLAS in 2024 and 2025.

Projects & Activities

Poimandres, Designer

Apr 2026 – Present

Working with community lead, Kris Baumgartner, to develop a design system for the collective.

Washes.js, Developer

Apr 2026 – Present

Vibe-coded a novel in-browser library that simulates watercolor painting.

St. Louis Queer Support and Healing

UI/UX Designer, Developer

Saint Louis · Jun 2025 – Present

This is a low-bono contractor role.

- Established analytics for SQSHBook, a web app, to support product decision-making and grant reporting.
- Interviewed community members to refine SQSHBook's key submission form, reducing the core experience from 200+ fields to five.

2019 Strange Loop Conference

Speaker

Saint Louis · Sep 2019

My spouse and I researched, prototyped, and presented several Machine Learning approaches to exploring and conserving the work of conceptual artist Sol LeWitt.

Skills

Figma, React, TypeScript, Tailwind CSS, Next.js, Storybook, Adobe Creative Suite, Node.js, Electron, SCSS, design systems, accessibility (WCAG 2.1), AI-native prototyping, user research, brand and product design, product strategy and roadmapping

Education BFA, Communication Design Minor, Computer Science, Washington University in St. Louis · May 2011
