Dear Honor Design team,

I'm excited to apply for the Senior Staff Product Designer role. Elevating the human elements of care delivery, while balancing technical and business constraints, is the bread and butter of my design practice.

**For six years I led Product and Brand at CareSignal, a Best in KLAS remote monitoring platform I co-founded.** As our sole product designer through acquisition, I owned my decisions end to end. I loved working closely with end users, Engineering, Account Success, Sales, and Marketing. I used service design to find where care was breaking down. Some outcomes I'm proud of:

- The clinician application I designed **helped individual nurse care managers safely oversee 15 times as many patients**: 1,500 instead of 100.
- When a health plan's CMO set a 20% enrollment target, I redesigned how members (older adults) joined, from our call center's tools to a coordinated journey across calls, mail, email, text, and a portal I built. **We reached 21%, more than four times our previous best of 5% for a similar member population.**

I couldn't have achieved those outcomes without relentlessly focusing on the people who experience what I make. I prefer designing with users, and I back up what I propose with quantitative and qualitative data. Because I can prototype in code, by hand and now with Claude Code, our team could iterate on ideas quickly without taking time from Engineering.

I've been a guest in homes like your clients'. Shadowing a home health occupational therapist across her city, I saw how many people, from a hired caregiver to family, quietly held one person's care together. It felt fragile. The older adults my students designed with at a senior living community showed me how much a stable, trusted relationship matters as friends and family pass away, and a brief stint on the board of Woven, a home care startup, showed me how caregiver turnover strains it.

I'd love to help Honor elevate the human side of care for older adults and the people who care for them.

Thank you for your consideration,

**C Stavridis** (they/them)
