C Stavridis (they/them) • Portfolio

Staff Product Designer & Design Engineer Scaling healthcare services across patients, clinicians, and operations. With 9 years in early-stage healthcare, I've owned product roadmaps, made hard prioritization calls with a small engineering team, and led launches from research through rollout. I prototype in code, by hand and with Claude Code.

Highlights

- **CareSignal 0→1:** Co-founded a Best in KLAS Remote Patient Monitoring platform and led its product design and roadmap. Designed the clinician web application nurse care managers used to safely scale from 100 to 1,500 patients each (15×), contributing to $5M ARR and 144% NRR.
- **Member enrollment:** Quadrupled enrollment conversion against our benchmark for a similar member population (5% to 21%), exceeding a health plan CMO's 20% target, by redesigning how older adults in its commercial and Medicare Advantage plans joined, from our call center's tools to a coordinated journey across calls, mail, email, text, and a self-enrollment portal.
- **Teaching and mentoring:** Taught Service Design and Product Design for Health at Washington University in St. Louis. For Product Design for Health, partnered with a local senior living community so students designed with older adults aging in place. Mentored designers interested in healthcare.

Relevant Experience

Independent Practice · prompt && pleasant, Recurse Center · 08/2024 – Present

- **LiquidStack:** Designed and built a cross-device ISO compliance application with line workers on the factory floor of a fast-growing coolant distribution unit manufacturer. Prototyped features in Claude Code to win stakeholder buy-in fast, then hand-coded the production app for quality.
- **St. Louis Queer Support:** Redesigned the resource submission form based on research with community members and the data team. Reduced 495 inputs to six fields for community submitters, with full detail unlocked for people affiliated with the resource. Used Claude Code to launch faster.

CareSignal (acquired by Lightbeam Health Solutions, 2021), Saint Louis and Remote · 06/2015 – 08/2024
VP of Product and Co-Founder, 2015–2021 · VP of Product (IC), 2021 – 2024
Sole product designer; led product and brand through acquisition, then IC lead on 0→1 projects. Managed a graphic designer and mentored aspiring product people.

Clinician Web Application
CareSignal began as an alert-based research tool. To commercialize it, we needed to help care teams manage larger patient populations without increasing manual outreach.

- Led discovery and iteration: market research, quality-of-life literature reviews, sales conversations, design workshops, analytics, product surveys, and shadowing nurses, doctors, and a home health occupational therapist on patient visits.
- Owned the roadmap and made prioritization calls with a small engineering team, weighing user needs, technical feasibility, and customer commitments.
- Designed touchpoints for sharing alerts and risk data with downstream clinicians: the web dashboard, printed reports, emails, faxes, Excel exports, and plain-text EHR notes.
- Redesigned an alert-based dashboard to combine urgent alerts with ongoing patient risk levels, helping nurses prioritize care across larger patient populations.

- Together, these workflows let nurses safely manage 1,500 patients instead of 100 (15×) and supported care team models covering up to 3,250 patients per shift. Contributed to $5M ARR and 144% NRR.

Call Center and Member Enrollment (payer clients)
As "enrollment czar," I owned enrollment on our roadmap: how to enroll more members without adding staff or compromising members' trust.

- **Capacity:** Audited our call-center app's reporting with managers, then specified an agent performance export instead of a new dashboard, plus automatic voicemail drops and a two-line power dialer; pitched and defended each with our co-founders, CTO, and engineers. Quarterly outbound calls rose 37% to 192,000+ within three months.
- **Trust:** Paired member rejection data with shadowing of enrollment agents to design a coordinated enrollment journey across mail, email, calls, text, and the portal.
- **Scale:** Designed, developed, and procured a HIPAA-compliant email system, introduced touchpoint analytics, and automated the patient-list scrubbing our engineers had done by hand, saving about six weeks of engineering time a year.

Radian

- Devised Radian, a free health equity data product that turned Jvion's social-risk predictions into location-specific dashboards, leading committees across Data Science, Clinical, Security, Marketing, and Sales.
- Established transition workflows from CareSignal's AWS stack to Lightbeam's Azure stack with IT and Security teams.
- Launched an enterprise version on the Microsoft commercial marketplace, qualifying the company for Microsoft's top ISV partner tier and unlocking $250K/year in Azure credits and a $50K incentive.

Education
BFA Communication Design, Computer Science Minor · Washington University in St. Louis, 2011

Certifications
Experiments in AI-Generated Media, MIT · 2021 ◆ Data Foundations Nanodegree, Udacity · 2018 ◆ Storytelling for Influence, IDEO · 2016

Skills
- **Research & strategy** Human-centered design · UX research · usability testing · research and test plans · interview facilitation · qualitative and quantitative synthesis · product analytics · roadmapping and prioritization
- **Service & interaction design** service blueprints · user journeys · user flows · information architecture · wireframes · prototypes · design specifications · multi-channel communications (SMS, IVR, email, print, fax)
- **Accessibility & systems** WCAG 2.0 / 2.1 AA · design systems · digital design language
- **Tools & collaboration** Figma · Adobe Creative Suite · Sketch · Claude Code · HTML, CSS, JavaScript, TypeScript, React, and Sequelize · design workshops · executive presentations
