

I am a Designer and Engineer. I take products from 0 to 1, build design systems, and ship them in code. Now I use AI to accelerate how I prototype, test, and build. I previously co-founded and exited an enterprise digital-health company where I developed products and user flows that enabled small care teams to reach dramatically more patients—all while maintaining positive provider-patient relationships. I care about crafting high-trust, low-burden experiences for clinicians and patients.

Experience

Participant Recurse Center

Sep 2025 – Mar 2026

Remote

Built full-stack prototypes exploring creativity and joy. I primarily used Next.js, Tailwind CSS, React, TypeScript, Supabase, and Vercel. Highlights:

- **Facets: a compound AI app to codify taste and generate visual experiments.** Users rank saved visuals against Aaker's Dimensions of Brand Personality. Users are encouraged to include written rationale. Facets prompts many models via OpenRouter to generate novel assets in HTML, SVG, p5.js, and GSAP.
- **Rain Check: a tool to help users send thoughtful event cancellations.** It's inspired by paper invites and bank-note design. Visualized with SVG, CSS, Mapbox, GSAP.

Creative Technologist prompt && pleasant

Jan 2013 – Sep 2025

Remote

A studio practice I share with my spouse.

- **Used AI to quickly prototype, pitch, and test features and hand-wrote code for production.** Shipped a distributed, air-gapped Electron app for a scaling manufacturing team. They were in the process of compressing their complex, six-month builds down to one month. The app digitized and centralized their records to track progress, improve adherence, and meet ISO compliance.
- **Led design, user research, front-end engineering, and API design.** Built the core scaffolding in Node.js, React, TypeScript, and Electron's IPC API. Designed bespoke UI flows and branded components with shadcn-ui.

Career Break

Aug 2024 – Sep 2025

Spent time building community and bonding with my toddlers, spouse, and dog.

VP of Product (Skunk Works) CareSignal — a Lightbeam Company

Jan 2021 – Aug 2024

Remote

Chose a hands-on IC role to go deep on craft after acquisition.

- Designed Radian, an AI-powered clinical product built on Lightbeam's Health Equity AI. Radian surfaced community vulnerabilities on a clinician-facing dashboard. It generated toolkits pairing actionable clinical guidelines with co-branded patient-facing materials.
- Prototyped and shipped Radian in code. Used the real data to support design decisions. Worked with Chief Data Scientist to update predictions based on personal intuition and user testing.
- CareSignal debuted in KLAS as an Emerging Solutions Spotlight in 2024 and won Best in KLAS in 2024 and 2025.

Co-Founder, Product and Brand Lead CareSignal

Jun 2015 – Jan 2021

Saint Louis and Remote

Established and led a compassionate product practice while contributing as an individual across the full product development lifecycle from research to production, support, and maintenance.

- **Designed and shipped products that supported new care paradigms** CareSignal was designed to fit

into many workflows such as a single nurse to managing 1,500 patients with COPD and CHF (up from 150) or a lean team of three (MA, RN, MD) to supporting 3,125 patients with acute needs.

- **Increased patient enrollment rates 300%.** Increased quarterly call volume by 37% to 192,000 calls. Designed an omni-channel strategy; led a cross-disciplinary team; and personally designed print materials and developed full-stack digital touchpoints necessary to achieve those outcomes.
- **Created CareSignal's design system.** Built WCAG 2.1-compliant components using atomic design and utility-first principles. Documented the component API in Storybook. Used SCSS and tokens to generate a branded color and type system. The system improved load speed 1.5x and is still in use
- **Contributed to \$5M ARR and 144% NRR YoY,** leading to our acquisition in November 2021.

Designer / Developer / Strategist happyMedium

Jun 2012 – Jun 2015

Saint Louis

Pitched, designed, and developed novel consumer-facing web and iOS applications for clients such as Warby Parker, Help Remedies, Orvis, Edward Jones, and AB InBev.

Activities

UI/UX Designer, Developer St. Louis Queer Support and Healing

Jun 2025 – Present

Saint Louis

This is a low-bono contractor role.

- Established analytics for SQSHBook, a web app, to support product decision-making and grant reporting.
- Interviewed community members to refine SQSHBook's key submission form, reducing the core experience from 200+ fields to five.

Designer Poimandres

Apr 2026 – Present

Working with community lead, Kris Baumgartner, to develop a design system for the collective.

Developer Washes.js

Apr 2026 – Present

Vibe-coded a novel in-browser library that simulates watercolor painting.

Part-time Educator Washington University in St. Louis

2017 – 2020

Taught interaction design, service design, web development, and a product design class on health and wellbeing.

Strange Loop Conference Speaker

Sep 2019

Saint Louis

My spouse and I researched, prototyped, and presented several Machine Learning approaches to exploring and conserving the work of conceptual artist Sol LeWitt.

Skills

Figma, React, TypeScript, Claude Code Tailwind CSS, Next.js, Storybook, Adobe Creative Suite, Node.js, Electron, SCSS, design systems, accessibility (WCAG 2.1), AI-native prototyping, user research, brand and product design, product strategy and roadmapping

Education

BFA, Communication Design Minor, Computer Science

May 2011

Washington University in St. Louis

Certifications

Experiments in AI-Generated Media, MIT (2021) · Data Foundations Nano Degree, Udacity (2018) · Storytelling for Influence, IDEO U (2016)
